

Cristopher Manuel Afonso Mora

Cybersecurity Specialist | Penetration Tester | Purple Team

Cosenza, Calabria, Italy | cristopherafonsomora@gmail.com | linkedin.com/in/cristopher-afonso |
github.com/CristopherAfonso

Professional Profile

Cybersecurity Specialist with over two years of experience combining offensive and defensive security under a Purple Team approach: Penetration Testing (OWASP Testing Guide, PTES, OSSTMM, MITRE ATT&CK methodologies), vulnerability assessment (SAST/SCA), OSINT reconnaissance, wireless security auditing, and incident handling within a Security Operations Centre (SIEM, Incident Response). Computer Engineer and MSc in Cybersecurity & Data Intelligence (University of La Laguna), Certified Ethical Hacker (CEH v13). I combine hands-on Red Team experience (dissertation projects, OneCyber internship) with a Blue Team perspective (current SOC role) to assess vulnerabilities from both sides of the board, automating security workflows with Python and Bash. My goal is to grow into a Senior Penetration Tester role, leading larger-scope offensive security engagements.

Professional Experience

Cybersecurity Specialist — Internet & Idee Jun 2026 – Present
Cosenza, Calabria, Italy | Permanent contract, full-time, hybrid

- Identify and prioritise exploitable vulnerabilities in dependencies and source code through SAST/SCA analysis (Snyk, Semgrep, SonarQube, OWASP Dependency-Check), applying a penetration testing mindset to distinguish theoretical severity from real exploitability, and producing technical reports with remediation recommendations for development teams.
- Investigate and manage over 500 security alerts per month within a SOC, correlating logs in Wazuh and IRIS to determine root cause, impact and corrective measures.
- Enrich threat analysis with intelligence feeds in OpenCTI, improving prioritisation of higher-risk alerts within the team.
- Developed a Python script that preprocesses SAST/SCA tool output and prepares report-ready data, cutting processing time per vulnerability by approximately 75% (from ~2 minutes to ~30 seconds), speeding up delivery of results to the team.

Cybersecurity Specialist (Traineeship) — Internet & Idee Dec 2025 – May 2026
Cosenza, Calabria, Italy | Traineeship contract

- Completed the official Certified Ethical Hacker v13 curriculum (over 3,500 pages of material), obtaining the CEH v13 certification upon completion of the programme.
- Consolidated hands-on skills in Nmap, Metasploit, Burp Suite, Nessus and OpenVAS applied to vulnerability assessment and penetration testing.

Security Software Engineer Sep 2025 – Nov 2025
Cosenza, Calabria, Italy | Internship contract

- Designed a PostgreSQL database of 23 related tables for an internal typosquatting domain detection tool, including user, role and permission management.
- Automated project configuration, deployment and testing through Bash scripts, and documented the technical architecture with Sphinx.

Junior Penetration Tester — OneCyber Mar 2025 – Apr 2025
San Cristóbal de La Laguna, Canary Islands, Spain | Internship contract (MSc)

- Carried out OSINT reconnaissance and attack surface mapping (Amass, DNSdumpster, LinkedInDumper, hunter.io, snov.io), validating close to 1,000 corporate email addresses.
- Performed initial web auditing and fuzzing against 3-4 endpoints/domains with Burp Suite Proxy, Nmap + NSE (tuning scan speed via `-T` and `--max-rate` to optimise detection), FFUF and Gobuster, to identify exposed resources and entry vectors.

Systems Administrator — INAT / INERSA / Atlantis Feb 2024 – May 2024
Santa Cruz de Tenerife, Canary Islands, Spain | Internship contract (BSc)

- Optimised the Active Directory structure (approximately 50 machines) and implemented GPO policies aligned with National Cryptologic Centre (CCN) recommendations, improving the domain's security posture.
- Designed a backup strategy (Veeam, rsync) and documented technical disaster recovery procedures.

Education

MSc in Cybersecurity & Data Intelligence — University of La Laguna

2024 – 2026

Average grade: 9.2/10

- Dissertation: reproducible wireless lab to experimentally evaluate the security of WPA2, WPA3 and WPA2/WPA3 Transition Mode through capture and analysis of authentication material.
- Hands-on secure infrastructure labs on Azure: designed a segmented network architecture with two virtual networks, each with its own machine, interconnected through a three-interface Azure Firewall (two internal networks plus Internet egress), defining filtering rules to restrict access to external sites and asymmetric traffic rules between segments (e.g. one-way ICMP blocking); also built a public key infrastructure (PKI) with GPG for exchanging and verifying encrypted certificates, and experimented with VPN encryption using the OpenSSL library.

BSc in Computer Engineering — University of La Laguna

2020 – 2024

Average grade: 7.7/10

- Dissertation: penetration testing and Red Team methodologies, with over 40 web exploitation labs (SQL Injection, CSRF, Path Traversal, SSRF) completed on Web Security Academy and TryHackMe.

Certifications

- **Certified Ethical Hacker (CEH) v13** — EC-Council, Jun 2026 – Jun 2029 (ID: ECC7623159408)
- **Oxford Test of English, B2** — University of Oxford, Aug 2025

Technical Skills

- **Offensive Security / Penetration Testing:** Burp Suite, Nmap, Metasploit, Kali Linux, Nessus, OpenVAS, Wireshark, Hashcat, Aircrack-ng, OSINT, Red Team, OSSTMM
- **Defensive Security / SOC:** SIEM (Wazuh), IRIS, OpenCTI, Incident Response
- **AppSec / DevSecOps:** SAST/SCA (Snyk, Semgrep, SonarQube, OWASP Dependency-Check), OWASP
- **Systems, networking and cloud:** Linux, Windows Server, Active Directory, GPO, LAPS, IEEE 802.11 (WPA2/WPA3), Azure (Firewall), PKI, VPN
- **Programming and automation:** Python, Bash, SQL, PostgreSQL, Git, OpenSSL

Languages

Spanish (Native) | English (Professional working proficiency – B2, Oxford Test of English) | Italian (Elementary proficiency – A2)
